

Technology Stack

Date	11 July 2026
Team ID	SWTID-2026-8118
Project Name	RK Health – AI Smart Patient Appointment & Medication Reminder System
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	HTML, CSS, JavaScript	Lightweight, dependency-free stack that renders quickly on GitHub Pages and keeps the Dashboard, Appointments, Medications, Reports and AI Summary pages fully responsive.

2	Backend / Server-Side	Google Apps Script	Serverless backend that can be deployed as a web app for free, handles CRUD requests, and integrates natively with Google Sheets.
3	Database / Data Storage	Google Sheets	Zero-cost, easy-to-inspect data store for Appointments, Medications and Reports — ideal for an internship-scale healthcare project.
4	Cloud / Hosting / Deployment	GitHub Pages	Free static hosting for the frontend with simple, version-controlled deployment directly from the GitHub repository.
5	Version Control & CI/CD	GitHub	Central repository for source control and direct publishing to GitHub Pages on push.

6	Third-Party APIs / Other Tools	Google Apps Script Web App API	Enables the frontend to perform CRUD operations (appointments, medications, reports) and pull data for the AI Summary module.
