Project Title	RK Health – AI Smart Patient Appointment & Medication Reminder System
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report outlines RK Health, an AI-assisted patient appointment and medication reminder system built to give a small clinic a single, low-cost dashboard for scheduling, medication tracking, reporting and AI-generated patient summaries. Key features include appointment and medication CRUD with search/filter/pagination, exportable reports, and an AI Summary module for quick patient insight.

Project Overview	
Objective	Give patients, front-desk staff and doctors a single, easy-to-use system to manage appointments, medications, reports and AI-generated health summaries without expensive infrastructure.
Scope	Covers appointment scheduling, medication tracking, report generation/export, a live dashboard, and an AI Summary module, all backed by Google Sheets via Google Apps Script.
Problem Statement	
Description	Patients and clinic staff currently rely on memory, paper notes and manual cross-checking to manage appointments and medication schedules, which leads to missed visits, missed doses, and no unified view of patient status.
Impact	Solving this improves appointment adherence, medication adherence, and gives doctors a faster, clearer view of each patient — improving both efficiency and patient outcomes.
Proposed Solution	
Approach	Build a lightweight web dashboard (HTML/CSS/JS) hosted on GitHub Pages, backed by Google Apps Script and Google Sheets, covering appointments, medications, reports and AI summaries end to end.
Key Features	- Appointment CRUD with search, filters, pagination and live status counts - Medication CRUD with dosage/frequency/date tracking and reminder status

- Reports module with CSV export and print support - AI Summary module generating health insights, risk levels and adherence scores - Dynamic, real-time dashboard with responsive design

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware	Development machine used to build and test the application	Standard laptop (no GPU/server hardware required)
Software – Frontend	Client-side technologies	HTML, CSS, JavaScript
Software – Backend	Serverless backend logic	Google Apps Script
Software – Database	Data storage	Google Sheets
Software – Hosting	Deployment platform	GitHub Pages
Development Environment	Editor / IDE and version control	VS Code, Git, GitHub
