

Code-Layout, Readability and Reusability

Date	11 July 2026
Team ID	SWTID-2026-8118
Project Name	RK Health – AI Smart Patient Appointment & Medication Reminder System
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

Well-structured code is essential for maintainability and collaboration. Document the standards, patterns, and principles your team followed to ensure the codebase is clean, readable, and highly reusable. Provide specific examples of how these practices were implemented in your project.

Code Quality & Structure Details

1	Folder / Directory Structure	Frontend pages are organized by module, with shared assets kept separate from page-specific logic.	Dashboard, Appointments, Medications, Reports and AI Summary each kept as distinct pages/sections
2	Naming Conventions	Consistent naming used for functions, variables and files across modules.	camelCase for JavaScript functions/variables; descriptive file names per module (appointments, medications, reports)
3	Code Readability & Comments	Key functions include comments explaining Apps Script request handling and data mapping.	Comments around CRUD handlers and Google Sheets read/write logic
4	Modularity & Reusability	Common UI patterns (tables, filters, search, pagination) are reused across Appointments, Medications and Reports.	Shared table/filter/pagination logic reused across the three list-based modules
5	Formatting & Linting	Consistent indentation and formatting applied manually across HTML/CSS/JS files during review passes.	Consistent formatting reviewed during the project audit with Claude Code

6	Error Handling Patterns	Google Apps Script responses are checked before rendering; CORS and formatting issues are caught and resolved centrally.	Centralized handling of CORS, date and time formatting issues identified during testing
