

Project Executable Files & Execution Guide

Date	11 July 2026
Team ID	SWTID-2026-8118
Project Name	RK Health – AI Smart Patient Appointment & Medication Reminder System
Maximum Marks	3 Marks

Project Executable Files & Execution Guide:

To document the source code repository, live deployment, and demo links, along with the key executable files and local setup steps for RK Health.

Step 1: Project Links & Access

Resource Type	URL / Access Link
Source Code Repository	https://github.com/sudharshan-163/RK-Health-AI-Smart-Patient-Reminder-System
Live Deployed Application	https://sudharshan-163.github.io/RK-Health-AI-Smart-Patient-Reminder-System/
Demo Video Link	https://sudharshan-163.github.io/RK-Health-AI-Smart-Patient-Reminder-System/

Step 2: Key Executable Files & Folder Structure

Primary files and where the core execution logic lives within the repository.

Folder / File Name	Description & Purpose
1. index.html	Dashboard — landing page with real-time appointment, medication, AI summary and report stats
2. appointment.html	Appointment Management — CRUD, search, filters, pagination, status tracking
3. medication.html	Medication Management — CRUD, search, filters, pagination, reminder status
4. reports.html	Reports — report table, filters, CSV export, print
5. ai-summary.html	AI Summary — AI-generated health insights and risk/adherence scoring
6. Google Apps Script project (bound to the Google Sheet)	Backend — handles CRUD requests and reads/writes to the Appointments, Medications and Reports sheets
7. static/css, static/js (asset folders)	Shared styling and client-side logic used across all pages

Step 3: Local Setup & Execution Instructions

Step	Action
1	git clone https://github.com/sudharshan-163/RK-Health-AI-Smart-Patient-Reminder-System → Downloads the project to the local machine
2	Open the project folder in a code editor / local server (e.g., Live Server) → Serves the static HTML/CSS/JS frontend locally
3	Deploy the accompanying Google Apps Script project as a Web App → Provides the backend endpoint used by the frontend for CRUD operations
4	Update the Apps Script Web App URL in the frontend's config/API calls → Connects the frontend to your own deployed backend and Google Sheet
5	Open index.html (locally) or the GitHub Pages URL → Launches the Dashboard and the rest of the RK Health app
