Scalability & Future Plan

Describe how the current solution can scale to handle increased load or users, and outline the features or enhancements planned for future releases.

Scalability

Current Architecture	Static frontend (HTML, CSS, JavaScript) hosted on GitHub Pages, with a Google Apps Script backend and Google Sheets as the data store.
Scalability Approach	Keep CRUD logic modular in Apps Script; batch/paginate Sheets reads and writes to reduce execution time as record counts grow.
Expected Growth / Load	Sized for a single small clinic's day-to-day appointment and medication volume; can extend to more doctors/departments on the same Sheets-based backend before a database migration becomes necessary.

Future Plan

S.No	Planned Feature / Enhancement	Target Timeline	Priority
1	SMS / email medication reminders (in addition to in-app reminders)	Future release	Medium
2	Migrate backend/data store from Google Sheets to a scalable database (e.g., Firebase / MySQL)	Future release	Medium
3	Enhanced AI risk-prediction models for patient summaries	Future release	Medium
4	Multi-clinic / multi-branch support	Future release	Low

Note: The roadmap above is a standard/placeholder set of future-enhancement ideas for this section, not yet confirmed as committed features.
